

RT three-fold axes produce the registered A2 / su(3) candidate witness

1. RT axis inventory

10 three-fold axes
20 vertices as opposite pairs

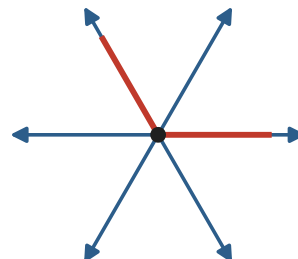

2. Gram-image reduction

Matrix/image rank 8 is not the Lie rank of su(3).

3. A2 fingerprint

Cartan matrix = $\begin{bmatrix} 2 & -1 \\ -1 & 2 \end{bmatrix}$

6 roots (3 positive + 3 negative)
2 Cartan generators

RT witness 10 axes -> 8D A2 match	Controls Cube / octahedron / cuboctahedron no full witness	Random control 0 / 1000 full witnesses fragile	Proof status basis dim 8; Jacobi pass 0.39 open
--	--	---	--

Caption discipline: this is a finite RT/A2 candidate witness. It does not claim theorem-grade uniqueness over all compact Lie alternatives.
